Anderson Powerpole Installation Secrets
by Tom Atwood

The tips and tricks you need to know!

Anderson Powerpoles are among the safest, most reliable and most useful of all connectors for electric-powered airplanes. They are easy to disconnect (you won’t damage your plane pulling them apart), expose no live metal contacts and do not require soldering. For a technical backgrounder on basic Anderson Powerpole installation techniques, see Del Schier’s Using Anderson Powerpole Connectors here.

Here, we will discuss additional key installation tips and tricks that, until now, have been known only to the “experts.” Powerpoles can convey current bursts of up to 100+ amps and can be run continuously at currents of up to 60 amps if well assembled. Review the following photos and read the captions carefully, and you will enjoy safer, more efficient electric flight while saving many hours of workbench time each year.

Tongue-and-groove dovetailing in the connector housings allows the cases to be connected snugly to each other.

Housings can be joined with contacts rotated in different directions to ensure plug compatibility.

Three contact sizes are intended for use with different wire gauges. The sizes are officially named for applications in building construction that assume 110 volts, so don’t be misled by the names. Left to right: The “45 amp” pin (#261G2) is for 10–14 gauge wire; the “30 amp” pin (#1331) is for 12–16 gauge wire; and the “15 amp” pin (#1332) is for 16–20 gauge wire. Once installed in connector housings, these different size pins snap together perfectly on the contact side.

The PWRcrimp Crimp Tool, offered at www.westmountainradio.com for $49.95, crimps all three sizes of pins.
The contact in the foreground has been crimped. The “spoon” component of the contact extends in a straight line; this angle must be maintained for proper mounting of the housing. If they are bent slightly upward they may not stay in the housing; bent down they do not mate with full force.

This pin has been crimped; notice that the contact portion has been bent slightly downward in the crimping process. A slight downward or upward bend can occur depending on the wire size you are using for a given pin. This is normal—the secret is to bend the pin back to align it parallel with the crimped portion.

Cutaway view shows steel springs that hold the contacts in place. The contact portion of the pins must be straight (not bent) for proper locking of the connectors. When you mount the pin in the housing, push the pin in by hand or with the help of a small screwdriver till you hear it “click” as the pin snaps in place over the spring. If you feel a few thousandths play side-to-side and about 1/32-in. when you jiggle the wire, you’ve done it exactly right: that is “pin float” and it will enable the pin to seat perfectly. You will hear a crisp snap when a properly assembled connector is connected to another Powerpole. It’s good for 10,000 connects and disconnects!

Note that the end of the crimped portion has slightly bunched up. This is not a properly crimped pin.

Detail views of a properly crimped pin.
To avoid a bunched crimp, which occurs when the pin is placed too deeply in the die cavity, mount the pin flush with the exterior face of the crimp jaw and apply just enough pressure to hold the pin, and then insert the wire and crimp. Shown is a 30 amp pin. The 45 amp pin die on the right (see arrow) is slightly recessed: when crimping a 45 amp pin, its base should be flush with the recessed exterior surface of the die. Before crimping a 45 amp pin, bend the ears on the end slightly together by hand to ensure proper folding in the crimper.

Be careful when opening the jaws to ensure that the contact is not stuck in the top die. If it is, stop opening the handle and push the contact out with a small screwdriver as shown. Tap it with a pair of pliers or small hammer, and the pin will fall free and the crimper will open on its own. Factors that can contribute to pin-sticking include the type of wire, condition of the dies, handle release tension and the contacts themselves. Keep the dies clean by rubbing the inside of the die with steel wool or Scotch-Brite to minimize sticking, or contact West Mountain Radio for assistance regarding stick pins.

You are already using other connector types? No worries, you can quickly and easily make patch cords to ensure cross compatibility for all your electric flight options. You can easily make parallel circuit patch cords (for flying with 2P lithium setups), and you can easily connect two batteries in series using Powerpoles. Few connector systems offer the ease of use of Anderson Powerpoles.

"For higher power rigs, high-amperage DC power supplies and bus-wiring, the Anderson Powerpole is the emerging national ARES/RACES standard."
The Power Pole uses a patented design. The 15, 30 and 45 Amp Housings are all the same, the contact Terminal changes for the different current ratings.

The mating connection is hermaphroditic (each connector is both male and female) and so only one type connector is needed. In a classical plug and socket arrangement the source of power was connected to the socket and the load connected to the plug. Since the Power Pole connector is both a plug and a socket this distinction need no longer be made. The same connector pair can be used for taking power out of a battery or charging the battery, greatly adding to the flexibility of the system.

Also, in the two newest patents, each side of the housing has a dovetail groove or tongue so you can stack the housings side by side and/or top to bottom. There may be as many as 12 different ways to connect two housings. ARES has standardized a pairing scheme for a red and a black housing for use with common "12 Volt" equipment using either the 15 Amp or the 30 Amp contacts.

The Contact and spring are a little closer to the mating end in a normal Power Pole. Cutting the housing open allowed the spring to move. You can also see that the actual electrical connection is between the terminals and there is a wiping action every time a connection is made. Any arcing or pitting will occur at the tips of the terminals, not at the final mated position.

The Anchorage Amateur Radio Club will not be doing a deployed Sweepstakes activity for 2009. Club members who wish to use the club station for this contest can contact the KL7AA trustee, KL7MM about club access and get checked out on the KL7AA club station. Keith, can be reached at trustee@kl7aa.net or via phone.

SPECIAL EVENT STATIONS:

Special Event Station N7I

WL7MY and KL7JR will be operating special event station “N7I” from Honolulu (Oahu Island HI-008S) Feb. 4-10, 2010 in celebration of the 16th anniversary of the US Islands Awards program.

Main frequency: 28.460 or 14.260. Equipment: TS-50 and vertical on mag mount. QSL mgr KL7JR.

For additional info: http://www.usislands.org

The Alaska DX Club (KL7DX and KL7CQ) has been granted a third call sign which we will be using for a yearlong special event (2009) in honor of the 50th Anniversary of Alaska's Statehood. The call sign is KL5O.

Attached a picture of what the QSL card will look like.
AARC General Membership Meeting
October 2nd 2009
Alaska Pacific University
Carr-Gottstein Building- Anchorage

The meeting was called to order by President Randy Vallee KL7Z at 1905 and the usual course of introductions were held.

The MS 150 went great and can be considered an outstanding success. Several people spent many weekends doing rf testing to make this race happen. The MS people had nothing but great things to say about our participation in their event. The sag wagon personnel were specially amazed at all the things that went on to support the race “below the surface”

Alan Brier N5XZ, made an announcement about the upcoming Alaska Day special event station KL5O that will be operating phone, cw and the digital modes on Sunday October 18th.

A large party of hams made the trek into the valley to the QTH of Rosemary KL7LA, and spent the day cleaning up and fixing her antenna farm. A great time was had and she can now operate in style.

As the designated “Disposer” of the Hamfest trash this year, John Orella made an impassioned plea that any “donations” the club gets in the future be edited for true usable status. The club received several donations of CRT monitors at the country store this year and they ended up costing us a significant sum to dispose of at the end of the Hamfest.

Heather is looking for a volunteer to take over the club coat project.

Election ballots are starting to come into the club mailbox and it looks like high number of hams are turning in their ballots to vote this year. Deadline is October 31st and they will be counted after that date.

Section Manager elections are coming around again and David Stevens KL7EB has thrown his hat into the ring along with the incumbent Jim Larsen AL7FS.

The Drawing was held at this point and NL7TZ, KL2EC, KL2EB, KL7IAF, KL7LW, KL2HN, KL1DY, and KL7Z were the lucky winners.

Final announcement was regarding the General Class to be held in November at the APDEA building in Anchorage.

Meeting adjourned at 1940.

KL7AA General Membership Meeting Minutes~ October 2009
KL7AA General Membership Meeting Minutes~ October 2009
KL7AA General Membership Meeting Minutes~ October 2009

The current club coat offers a good winter coat for those in Alaska. With a removable liner, lots of pockets, and waterproof, the coat gives the radio club great publicity with a full back, club logo and a Name and Call-Sign Personalization on the left chest.

The Board at the October 2009 club meeting agreed to no longer subsidized the cost of this coat to our membership. This is primarily due to our income being down significantly this year.

For those of you interested in purchasing a coat, the new prices are:

Small, Medium, Large and XL: $110.00
2X: $120
3X: $130

There is also a $25.00 embroidery fee and $7.00 to get your name and call sign on the coat. The club has agreed to pay for the embroidery fees. This is a great price for a coat than can be used during summer amateur activities or as a winter coat. You must have a current club membership.

If you are interested in ordering a club coat, a sign up sheet will be available at the club meeting or send your name, phone number, email address and payment to Lee Ann Wells, KL7LW. Lee Ann can be reached at: 350-3480. Orders can be placed up until the First Friday in December 2009 and LeeAnn will then place the order. If you have questions feel free to contact Lee Ann at KL7LW@yahoo.com
WHEN: December 4, 2008
7PM - 9PM
WHERE: APU AARC Meeting
We will be having a radio club holiday Potluck for the December 2009 meeting. A Santa Claus look alike contest will take place and a Chinese Auction will also occur.
Club members are asked to bring a potluck item.
A - H: A side dish or Salad
I - S: A Primary Dinner
T-Z: Deserts
Members should be cautious of incoming snowballs.

AARC BADGES
The badge comes with your Name and Callsign engraved, the club logo on an arch 3 inch dome as well as the option of purchasing individual name plates for each position you have served for AARC. If you are interested in purchasing an AARC badge, the costs is $20.00 per member for each badge and $2.00 per customized name plate. Badges have the option of a pin or magnet attachment.

For more information about this project or to order your badge today in time for the convention and outdoor public activities, please contact Michael O’Keefe, KL7MD at 907-351-4038 or via email at: mok@gci.net.

When ordering, please indicate your name, Callsign and if you wish to have any additional name plates added.

Orders take approximately 10 days for printing and our made locally in Anchorage.

From Bethel: Just wanted to let you folks know we completed another Tech class this past weekend and licensed another 14 new hams! We now have 56 licensed hams in Bethel. Congratulations to the Bethel Amateur Radio Klub for their outreach and promotion of amateur radio in western Alaska.
**KL7AA HAMSHACK**

The KL7AA station is available for training in HF operations. Learn from an experienced HF operator about propagation, voice and Morse code modes as well as best practices and legal operations. The station is fully integrated with a PC and soundcard to operate in many digital modes. There are weekly contests to participate in even if just helping Hams all over the world gain points and multipliers to win awards.

Your club station is quite capable and has great ears. Club operators have made many QSO's with all modes on all continents. Recent activities have seen SSTV QSO with New Zealand, hearing a Fallujah Iraq operator on PSK, a 15 meter contact to Peru during the CQ WW Phone contest. Common contacts are made with the lower 48 states and Caribbean, Canada, Japan, Korea, Taiwan, China, Russia and islands in the Pacific.

Take advantage of this unique benefit! Arrange a session by contacting the club trustee, Keith Clark, KL7MM to meet at the KL7AA station on Rowan Street.

**KL7AA Mail Reflector**

If you like to **stay in touch on KL7AA news** and other posts of local interest.

Step #1: First point your browser to:  
http://mailman.qth.net/mailman/listinfo/kl7aa

Step #2: On the web page you will see a section titled "Subscribing to KL7AA". Enter your e-mail address in the "Your email address" entry box.

Step #3: Pick a password for your account and enter it in the box marked "Pick a password" and then enter the same password in the box marked "Reenter password to confirm". This password will be used to change your settings on the list such as digest mode, etc.

Step #4: If you would like the e-mails in daily digest form click yes on the line marked "Would you like to receive list mail batched in a daily digest?"

Step #5: Click on the "Subscribe" button below the information that you just entered.

---

**Are you a member of ARRL?**

ARRL is the American Radio Relay League. This is the national organization that advocates on behalf of amateur radio operators to the FCC and the communications industry. KL7AA is an ARRL affiliated club with more than 50 years. Consider becoming a member of ARRL today.

**Fore more information about the ARRL DXCC Program check out:**  
http://www.arrl.org/awards/dxcc/

Dit- a diddle dot dit.

Back when the telegraph was the fastest method of long-distance communication, a young man applied for a job as a Morse Code operator. Answering an ad in the newspaper, he went to the office address that was listed. When he arrived, he entered a large, busy office filled with noise and clatter, including the sound of the telegraph in the background. A sign on the receptionist's counter instructed job applicants to fill out a form and wait until they were summoned to enter the inner office.

The young man filled out his form and sat down with the seven other applicants in the waiting area. After a few minutes, the young man stood up, crossed the room to the door of the inner office, and walked right in. Naturally the other applicants perked up, wondering what was going on. They muttered among themselves that they hadn't heard any summons yet.

They assumed that the young man who went into the office made a mistake and would be disqualified. Within a few minutes, however, the employer escorted the young man out of the office and said to the other applicants, "Gentlemen, thank you very much for coming, but the job has just been filled." The other applicants began grumbling to each other, and one spoke up saying, "Wait a minute, I don't understand. He was the last to come in, and we never even got a chance to be interviewed. Yet he got the job. That's not fair!"

The employer said, "I'm sorry, but the last several minutes while you've been sitting here, the telegraph has been ticking out the following message in Morse Code: 'If you understand this message, then come right in. The job is yours.' None of you heard it or understood it. This young man did. The job is his.

CW IS!
AARC Election of Officers and Directors

ARTICLE VI
PROCEDURE FOR THE ELECTION OF OFFICERS AND DIRECTORS

The Voting Members shall elect the officers and directors of the corporation by majority vote by submitting written ballots designating their choice of officers and directors prior to October 31st of each year. The procedure for election of the officers and directors shall be as follows:

Nominations. The Election Committee shall nominate individuals for the open officer and director positions at the regular meeting of the members in September. Members of the corporation may also nominate individuals to run for election as officers and/or directors at the September meeting. Such nominations must be seconded by two members and have the nominee’s consent.

Eligibility. A member may not hold two elected offices concurrently.

Distribution of Ballots. The Secretary shall prepare and distribute one ballot to elect officers and directors to each Voting Member whose address of record is within the state of Alaska on or before October 1st. Voting Members shall not be permitted to vote by proxy.

Return of Ballots. Completed ballots must be returned to the Secretary on or before October 31st to be counted.

Tabulation. The Secretary shall present the sealed ballots to the Election Committee to open and tabulate.

Results. The Election Committee shall determine the results of the election and announce the new officers and directors at the November regular meeting of the members. In the event of a tie, resolution shall be decided by a coin toss.

Timetable

Anchorage Amateur Radio Club
Rules of Procedure

Paragraph III: Elections

Section A: Election of Corporation officers and Directors shall be by written secret ballot.

Section B: Nominations, election procedures, and timing of the elections shall be as follows:

July, 2009 - AARC Board Meeting. The election committee of Heather Hasper KL7SP, Eric McIntosh KL2FM, and Paul Spatzek WL7BF, was established with Paul Spatzek, Secretary as Chair.

August 7, 2009 – The election committee will be announced to the membership. Committee Chairman will address members on the procedures and timetable.

September 4, 2009 - Membership meeting. Election committee presents slate of candidates to the members. Additional nominations will be accepted from the floor. After receipt of additional nominations, if any, nominations will be closed.

October - The Secretary shall prepare and distribute, by mail or otherwise, one ballot to elect officers and directors to each eligible member, as defined in the Bylaws, on or before October 1st. Ballots must be returned to arrive by October 31st.

November 6, 2009 – Membership meeting. Prior to the meeting, the Election Committee shall count ballots and determine the result of the election. In the event of a tie, the winner shall be determined by a coin toss. At the meeting, the Chairman of the Election Committee shall announce the new Officers and Directors.

November and December 2009. The newly elected Officers and Directors attend Board meetings as non-voting participants.

Section C: Election of Officers shall be by majority vote of members voting.

Section D: Only members in good standing as of the close of the September Member Meeting shall vote. The Membership Chairman shall notify the Secretary, prior to October 1, of the members eligible to vote.

Section E: Only ballots received by October 31st shall be counted. Ballots shall be delivered to the Secretary, by mail or otherwise, and submitted by the Secretary to the Election Committee.

No member may be nominated unless he or she has agreed to serve in that capacity if elected.

On Tuesday October 27, the FCC's Wireless Telecommunications Bureau (WTB) granted the first waiver that allows amateurs who participate in a government-sponsored emergency preparedness and disaster drill to communicate on behalf of their employers during the drill. The waiver request was made on behalf of the Commonwealth of Kentucky. That state will be conducting a full-scale exercise on Wednesday, October 28, 2009 from 8 AM-5 PM to test their emergency response to the possible release of chemical agents at Blue Grass Army Depot, located near Richmond, Kentucky.

"The waiver request was what could almost be termed a 'textbook example' of the process," said ARRL Regulatory Information Manager Dan Henderson, N1ND. "The waiver request met all of the criteria outlined in the Commission's recent Public Notice DA 09-2259: A government-sponsored drill, the specifics of when and where the event would happen, the identification of the amateur licensees that would be providing communications on behalf of their employers, the identification of the employers and a brief description of the drill. With all of the requirements in order, the WTB was able to turn the waiver around promptly, allowing the amateurs involved to participate in the exercise."

It is important to note that while this particular waiver -- the first issued under the new guidelines -- could be readily handled within the short time frame, Henderson suggests that government agencies wishing to request similar waivers in the future provide sufficient lead-time for their requests. "I wouldn't recommend that a waiver request be filed at the last minute," he said. "The Kentucky waiver had the benefit of being the first one -- meaning there was no lag time in processing. It also had the advantage of easily meeting all of the requirements, making it an easier decision. I would encourage government agencies to file the waiver request as soon as they know which amateurs will need to be included in the waiver. This will allow the FCC as much lead time as possible. I am not certain they will be in a position to expedite last-minute requests."

The ARRL Certification and Continuing Education Program, was approved by the ARRL Board in January 2000. Volunteers from all over the country assisted in pulling together information for the course. Because the topic of emergency communications is so diversified and so much information is available, the material is broken into three levels: Introductory, Intermediate and Advanced Emergency Communications (Levels I, II and III).

Each on-line course has been developed in segments -- learning units with objectives, informative text, student activities, and quizzes. Courses are interactive and include direct communications with a Mentor/Instructor and other students. Check out: http://www.arrl.org/cce/ for more information.

**Mission statement:**
Dedicated to amateur radio as it pertains to disaster services. The history of amateur radio operators' involvement in sending life-saving information in and out of disaster areas [and] providing help during and after earthquakes, floods, hurricanes and tornadoes. "HAM's have been there to assist local, state, and federal agencies and relief organizations such as the American Red Cross and Salvation Army." When All Else Fails, Amateur Radio.
Any AARC sponsored repeater, with or without an auto-patch, will always be open to all licensed amateur radio operators in the area who are authorized to operate on those frequencies. IRLP is not authorized on KL7AA repeaters except for special events as approved by the board and trustee.

Regular HAM Gatherings:
Tuesday Lunch, 11:30 AM: Denny’s on Denali behind Sears. Several old timers show for this and have lots of stories to share about amateur radio in Alaska.

Saturdays Breakfast, 7:30 AM: Here is a good way to get started on the weekend. Come and meet with some of the locals and have a great breakfast at Peggy’s Restaurant at the corner of Concrete Avenue and 5th Avenue across from Merrill Field. Great Fun.
